3	Deployment ke server	Kamis, 1 Juli 2021	1. Screenshot	 <p>The screenshot displays a web browser window with the URL <code>digitalocean.com/community/tutorials/how-to-install-node.js-on-centos-8</code>. The page title is "How to Install Node.js and Create a Local Development Environment". The content is organized into sections: "CONTENTS", "Prerequisites", "Option 1 — Installing Node from the CentOS AppStream Repository", "Option 2 — Installing Node Using the Node Version Manager", "Option 3 — Installing Node from Source", and "Conclusion".</p> <p>The "Option 1" section is highlighted, showing the installation of Node.js using the CentOS AppStream repository. The text states: "Two streams are available, 10 and 12. The [d] indicates the default stream. If you'd prefer to install Node.js 12, switch module stream to 12." The command <code>\$ sudo dnf module enable nodejs:12</code> is shown.</p> <p>The "Option 2" section is also visible, showing the installation of Node.js using the Node Version Manager (NVM). The text states: "You will be prompted to confirm your decision. After you confirm, you can continue with the installation. For more information, see the official CentOS AppStream documentation." The command <code>\$ sudo dnf install nodejs</code> is shown.</p> <p>The "Conclusion" section states: "Again, dnf will ask you to confirm the actions it will take. Once you confirm, the software will install. Check that the install was successful by querying node for its version number:"</p> <p>The terminal window on the right shows the following commands and output:</p> <pre> root@alahawaw:/home/app/disbun-peminjaman-barang-iventaris \$ sudo dnf module enable nodejs:12 Total: Running transaction check Transaction check succeeded.
